RESEARCH ACTIVITIES

01 Oct 2022 – present	<p>Principal investigator - Starting Grant “TERANOMiRNAs - miRNAs as theranostic biomarkers in cardiovascular diseases” - University of Catania Two-years research project financed by the University of Catania.</p>
19 Oct 2020 – May 2022	<p>Member of International Research Group “International Individual-patient pooled case series identifying histopathological features of COVID-19 related lung disease” - Harvard Medical School and Universities of Foggia and Catania This research project aims to quantify the histopathological patterns of disease in COVID-19 pneumonia using a comprehensive dataset from different studies worldwide. The long-term goal is to be able to answer a number of questions about the pathophysiology of COVID-19. 24 groups from different countries are part of this research project.</p>
14 July 2020 – May 2022	<p>Member of National Research Group F.I.S.R. “Post-mortem investigation in COVID-19 subjects: focus on brain damages to improve the COVID-19 survivors” – University of Catania, University of Foggia and University of Messina This research project aims to identify a unique protocol for therapies and monitoring in order to improve the lives of COVID-19 survivors.</p>
1 Nov 2019 – May 2022	<p>Member of Research Group who win the Grant of University of Foggia with the Research Project titled: “Gender difference in cardiac damage induced by drugs of abuse: relation to oxidative stress and inflammation ” This research project aims: - to improve the understanding of the molecular mechanisms linking biological determinants of gender, drug abuse, and its consequences on the cardiovascular system; - to identify new redox and inflammatory biomarkers as well as morpho-structural aspects to be used practically in the clinical setting for an early diagnosis of gender-differentiated cardiac vulnerability to drugs of abuse; - to identify new molecular targets of a different gender to be considered for the development of preventive/therapeutic strategies for cardiac toxicity and damage induced by drug abuse.</p>
1 Oct 2018–May 2022	<p>Technical Responsible of RESEARCH PROJECT "Living in a plastic-free world" University of Foggia, Foggia (Italy)</p> <p>The objectives of this project are:</p> <ul style="list-style-type: none">- Know the food habits related to the packaging of a sample of the population of the province of Foggia (Municipality of Biccari);- Determine the levels of different food contaminants - with particular regard to contaminants with endocrine disrupters (bisphenols and alkylphenols) - in urine samples from schoolchildren in the Municipality of Biccari (FG);- Evaluate the levels of different food contaminants correlating them with packaging-related habits detected through a questionnaire- Determine the positive effects of virtuous eating behavior such as the “plastic-free” school canteen adopted by the Municipality of Biccari (FG) by evaluating the variation of food contaminants (at 3 and 6 months).
1 Jun 2016–Present	<p>Member of Research Group Project titled: “Life style, medicine and Anabolic (and psychoactive) drugs: new biomarkers for AAS and smart drugs abuse and innovative smart watch 4.0 for health monitoring.” This research project aims: - To identify new biomolecular markers, capable of highlighting the presence of abuses of AAS / nootropics / smart drugs and the presence of Metabolic Syndrome (MS); - To Propose new non-invasive methods for monitoring the metabolic syndrome and for the identification of subjects addicted to the use of AAS and smart drugs; - To Evaluate various humoral parameters in 140 "CD1" mice weighing about 30 / 35gr. The evaluation will take place by dividing them both in relation to the type of physical activity carried out, and in relation to the intake of Nandrolone, Nandrolone + Smart Drugs, Nandrolone + Smart Drugs + Metabolic Syndrome, Metabolic Syndrome and control group; - To Evaluate in a cohort of 300 athletes, aged between 18 and 40, recruited in gyms, the percentage of subjects addicted to the use of substances such as AAS and smart drugs by completing the assessment with humoral parameters, cardiovascular and nervous system assessments; - To Evaluate the same parameters mentioned above for the control group consisting of 300 subjects, homogeneous by age and sex; - Develop and implement an innovative "smartwatch 4.0" for monitoring humoral parameters in a non-invasive way that allows the early identification of subjects suffering from metabolic syndrome and habitual users of AAS and Smart Drug.</p>
2013–Present	<p>MEMBER OF ATHLOME CONSORTIUM PROJECT The Athlome Project aims to collectively study the genotype and phenotype data currently available on elite athletes, in adaptation to exercise training (in both human and animal models) and on exercise-related musculoskeletal injuries from individual studies and from consortia worldwide. To achieve this, several steps are set out:</p>

Curriculum vitae

To establish an ethically sound international research consortium (Athlome Project Consortium) and biobank resource systematically across individual centres;

To discover genetic variants associated with exercise performance, adaptive response to exercise-training, and skeletal-muscle injuries using the genome-wide association study (GWAS) approach, targeted sequencing or whole genome sequencing, where possible;

To validate and replicate the genetic markers from the discovery phase across sex and ethnicity; and

To conduct functional investigations following replicated findings (e.g., study the replicated SNPs and their linkage disequilibrium regions, in vitro expression studies and knockouts of nearby genes) to better understand the associated biology.
